

## **IV & ORAL CT CONTRAST DOSES FOR PEDIATRICS**

- **IV Contrast**

- The default contrast agent is Omnipaque-300.
- GFR guidelines are the same as for adults.
- Volume (mL) of IV contrast administered = weight in lbs (or  $2.2 \times \text{wt in kgs}$ ).

- **Oral Contrast**

- Wait 45 mins after consumption before imaging the patient.
- Dilution is 30 mL Omnipaque-240 added to 500 mL of a noncarbonated beverage (e.g. water, juice, punch, milk).
- The volume in the below table is the volume of fluid given to the patient after the contrast has been diluted.
- Volume (mL) of dilute oral contrast given =  $5 \times \text{weight in lbs} + 39$  (or  $11 \times \text{wt in kgs} + 39$ ).
